

Verified Consulting — Pursuit SMB Build

Building an AI-powered PR reporting portal for Verified Consulting (Tenyse Williams) under the Pursuit SMB Builder Program. Three real agents (Discovery, AVE Calculation, PR Kit Design/Canva export) plus shared AI writing functions. Demo Day at Google HQ, September 23. Also tracking a related but separate scope: Raise Local, a matchmaking platform Tenyse is co-founding — design-only, post-program work, not part of the current build's deliverables.

Verified Consulting — VC Dashboard

Working on the Verified Consulting PR reporting portal for the Pursuit SMB Builder Program (Tenyse Williams, client). Always verify claims about what's built by checking actual files in this folder — never report something as done based on a plan or a past conversation without confirming it's really there. Follow existing file/folder naming patterns already in this codebase rather than guessing new ones. Flag any gap between what was previously discussed and what the code actually shows.

Coaching program: Chef Garth (Greyz Bistro) is the one active client, using both PR and coaching simultaneously. Coaching is meant to be genuinely functional for his September start — not just a static preview. Keep it scoped to what he actually needs: real modules/notes he can view, a basic progress checklist, nothing gamified or automated yet.

Raise Local is a separate, related platform (business/nonprofit matchmaking, different brand, different users) that Tenyse wants prioritized — but it is explicitly OUT of scope for this build. Design-only work on it, if any, happens after September 23rd, not before. Never treat a Raise Local request as part of the current deliverables without an explicit, separate check-in about it first.
